### **STATEMENT OF REASONS FOR ALLOWANCE**

Claims 1-23 are allowed for the reasons stated in the parent file.

With respect to claims 28-34, 45-47 and 56-61, none of the cited prior art references disclose the specifically recited method further providing that the "third current" is "dependent on a power-supply voltage".

With respect to claims 40-44, none of the cited prior art references disclose generating two current complementarily dependent on temperature, generating a third current dependent on a "first voltage" and combining the current to generate a "second voltage".

With respect to claims 48-55, none of the cited prior art references disclose the four currents having the specifically recited limitations and using the current to drive a node.

With respect to claim 62, none the cited prior art references disclose connecting a "load" to either "the power-supply voltage" or "a secondary supply" based on the comparison.

Art Unit: 2816

With respect to claims 63-66, none of the cited prior art references disclose the specifically recited method of generating three currents related to temperature and further generating a "fourth current" is "dependent on a power-supply voltage".

With respect to claims 68-71, none that the cited prior art references disclose a method wherein the first current is a "reference current" from a "first current source that is powered by the supply voltage" that has a "temperature coefficient that is independent of the supply voltage" and wherein the second current is a "supply-related current that is powered by the supply voltage" having a similar "temperature coefficient" and is "related to the supply voltage".
